

Creonic Successfully Renewed its ISO 9001:2015 Certification

Kaiserslautern, Germany – July 25, 2025 – Creonic GmbH, the leading provider of cutting-edge communications IP cores, is proud to announce that it has successfully renewed its ISO 9001:2015 certification. This underscores the company's commitment to managing quality, satisfying customers, and continuously improving its processes.

The ISO 9001:2015 certification is an internationally recognized standard for quality management systems (QMS). By aligning its internal processes with this framework, Creonic ensures consistent and efficient operations that meet the demanding requirements of complex communication systems.

"This certification reflects the structured and consistent work of our team across all departments. Maintaining the highest quality standards is not just about certification—it's about the daily commitment our colleagues show in every step of our development and delivery processes.", said Thorsten Köster, Quality Officer at Creonic GmbH.

This achievement underlines Creonic's reliability as a supplier to international customers in regulated industries and its ongoing commitment to excellence in the design and delivery of high-performance IP cores.

About Creonic

Creonic is the ISO 9001:2015 certified leader in ready-for-use IP cores, offering a rich services and product portfolio for wired, wireless, fiber, and free-space optical communications. Covering essential digital signal processing algorithms such as forward error correction, modulation, equalization, and demodulation, as a preeminent provider, our solutions support industry standards like 3GPP 5G, DVB-S2X, DVB-RCS2, CCSDS, and Wi-Fi. Designed for ASIC and FPGA technologies, Creonic's products meet the highest benchmarks of quality and performance. Trusted by dozens of customers worldwide, from innovative start-ups to global corporations, our IP cores power communications devices and chipsets, satellites, and NewSpace ventures, enabling unparalleled reliability and success in advanced communication systems.
